Mobile Hi Tech Care

The world of technology intersects with the world of quality patient care with S&S MedCart's family of **Hi Tech Mobile Computing Carts**. From Computers on Wheels to Point of Care Carts, S&S provides a cart to fit the needs of both your Information Technology and Patient Care staff, with cost effective solutions to fit the needs of your facilities, big or small. With the addition of optional bar code scanning equipment, the S&S Mobile Cart becomes a complete unit for recording patient information, dispensing medication, and recording real time data for patient care and your facility's billing and record keeping.

- Three automatic locking 9" x 11" storage drawers
- Large easy to clean work surface with SpillGuard protection for the electronics
- Optional dual password Narcotics Locking Drawer
- SilentPartner Access Software

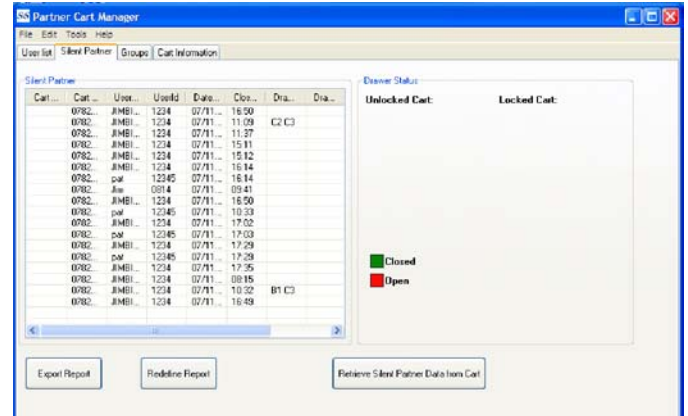

Silent Partner®

The Silent Partner® lets you track access to each cart, helping you meet federal, state, and local requirements for controlled access and accountability for dispensing of patient medications and narcotics. With over 500 unique and individual user IDs available at your fingertips, each cart records when the cart was accessed and by whom. Optional software allows this information to be downloaded to any Windows compatible PC.

Multilevel access includes settings for administrators, pharmacists, nurses and other patient level staff. You control all the aspects of access for your carts.

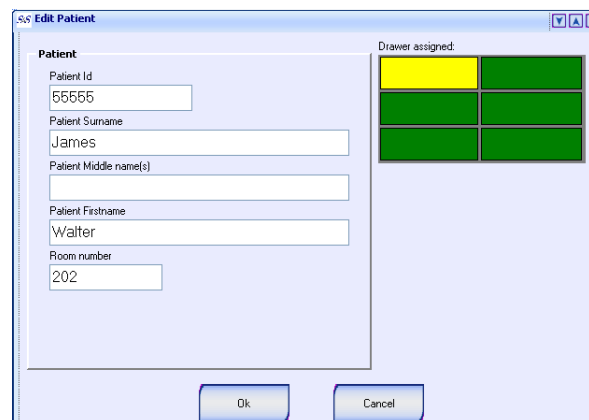

Partner Manager gives you real-time information about the status of your cart.

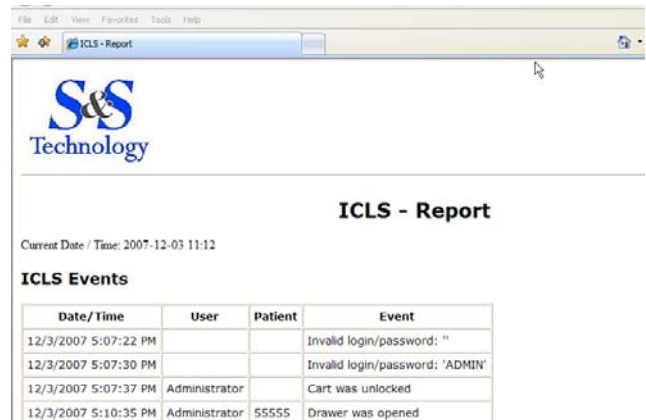

Silent Partner, available on all PRN Series Carts, allows you to view and download access records locally or remotely.

ICLS® (Independent Controlled Locking System)

ICLS® gives your staff an added measure of security and confidence. By allowing only one patient bin to be unlocked at a time, it helps to insure the right patient gets the right medication each and every time. HTML formatted access reports are viewable over your network. Multiple levels of access give your administrative staff control over who can dispense the medications stored in the cart. ICLS is available on the Sidekick and the MD6 version of the Companion Carts.

ICLS gives you individual patient bin access.

HTML-based reporting system gives you networked access to access of the cart.
