## Remote Cabinet System

State of the art dispensing of medications and supplies comes together with state of the art accountability and control in the S&S **Remote Cabinet System**. Now give your care staff the ability to have recordable access to the medication their patients need while at the same time limiting access to only those caregivers who need it. Several of the cabinets allow for patient and inventory information to be transmitted and accessed via RFID Scanner, Barcode Scanner, or Magstrip reader, for patient records and billing. Remote internet/intranet or Bluetooth access is available on most of the **Remote Cabinet System** devices.

### **CC300 CathCabinet**

- Hook mounted slides provide hanging catheters extension out of the cabinet
- Data logs record access to the cabinet 24 hours a day
- Customized inventory records can automatically be emailed with access, inventory levels and records, and cabinet status issues
- Remote access via secured internet/intranet wireless system
- Real time reporting of when the cabinet was opened and by whom via HTML or downloadable and exportable database file
- Full size (as pictured to the right) or half size units to fit the space and needs of your facility
- Optional barcode scanning or RFID recording available to record exact information as to what medication was dispensed to what patient
- Optional Bluetooth remote access available

### **Remote Dispensing Cabinet**
